## EXPANSION

Expansion is variously defined as dilatation, growth, increase, aggrandizement, distension, inflation, and so on. In comparing the labors of the poet to the man who designs in order to build, Dryden, the translator of the Iliad and Aeneid, once remarked upon the necessity for exactness in both cases in the matter of casting up costs before, since both are generally mistaken in their reckoning of the expense involved. Each alters his mind as the work proceeds and will have this or that convenience more. To quote Dryden: "So it happened to me and where I intended but a lodge, I built a house and yet with better success than a certain nobleman who, beginning with a dog kennel, never lived to finish the palace he had contrived."

Now here is something that will satisfy all of us who are fond of spilling ink, as well as give pause to such as are bold enough to start building an edifice. The next time we sit down to write a short editorial which presently turns out to be a treatise, we shall know that Dryden, at least, would have understood. When we see what began as a modest two-story building develop into a skyscraper with wings, threatening to dwarf the pyramids and filled with clerks chewing gum and banging typewriters with one eye on the clock and the other on their alphabetical tetrarch, it is comforting to realize that Dryden would have known all about it even if we don't.

Army Medical Library

Microfilm copying of the periodical literature of the Army Medical Library was begun by Bibliofilm Service of the U.S. Department of Agriculture in 1936 and continued until September 1940 when an independent service under the auspices of the Friends of the Army Medical Library was established. Due to the expanding needs of microfilm copying for Regular Army and Federal establishments and other calls made upon it in the present emergency, additional equipment and enlarged facilities have been added at public expense. It has now become possible to substitute microfilm copying to a limited extent for interlibrary loans. Microfilms will be sent without charge in lieu of the loan of the books to all accredited medical librarians who prefer them or where books or journals cannot be loaned.

This service should result in a saving for the borrowing librarian since the responsibility for safekeeping and return of the books will be eliminated and no records will be required. The person receiving the microfilm will have no obligation for its return and may retain it for future use.

The total amount of work which can be done on this basis is of course limited by appropriations now available, hence there will be a limitation in the extent of the service, as to quantity. Orders for microfilm copying, except in particular cases, where bulk or commercial work is involved, will not ordinarily be accepted from individuals, but only through libraries, in the same manner as interlibrary loans.

The following postage should be included with each order for microfilm:

Articles totaling up to & including 100 p. send... 1½  
" " " " " 400 p. " .... 3¢  
" " over 400 p. send 4 1½ stamps... 6¢
